IRSA Pflegeöl NEUTRAL

For brightly coloured oil surfaces
which should stay longer bright

The bright colour should remain IRSA Pflegeöl "neutral" (IRSA Care Oil "neutral")

Do you know the ugly effect when the brightly pigmented oiled floor gets immediately darker after polishing with a colourless care oil?

This is avoided with the new IRSA Pflegeöl "neutral".

The IRSA Pflegeöl "neutral" can both be used on surfaces treated with oils for care and protection and maintenance at the same time. The appearance of IRSA Pflegeöl "neutral" has a neutral effect on brightly pre-oiled surfaces and hardly changes as the pigments of IRSA Pflegeöl "neutral" are optimally agreed with the brightly coloured surfaces.

This is how you can optimally care for the surface (frequency depends on appearance):

Depending on the application procedure, approximately 10-25 ml/m², i.e. 0.45 L IRSA Pflegeöl "neutral", is enough for approximately 20 m² oiled surface.

Very strong dirt is initially dried or removed with IRSA Seifenreiniger (IRSA Soap Cleaner). The well shaken IRSA

Pflegeöl "neutral" is applied onto the pre-impregnated IRSA oil cloth in fine doses and wipe the dry surface or polish the IRSA Pflegeöl "neutral" with the single-disc machine and rub in with a dry beige pad. If necessary, the IRSA Pflegeöl "neutral" (stronger dirt, mat, slightly grey appearance) can also be directly and equally applied onto the dry surface in fine doses. After 10 minutes exposure time, rub in the excessive IRSA Pflegeöl "neutral" with a dry beige pad or with IRSA Blitzboy or manually polish in.

Oxygen and temperature from +18°C accelerate the drying process. The drying time of the purely and directly applied IRSA Pflegeöl "neutral" is at least 6 hours (at +20°C and 55% rel. humidity). After drying, polish the surface again (white pad). The shelf-life of the well closed container is approximately 10 months.
